

IBM

Series III

Copier/Duplicator

Here are the advanced features you require in a copier/duplicator...

Series III Model 10

Series III: The Complete Capability.

It automatically duplexes... so you copy onto both sides of a single sheet of paper. Simply. Quickly. Automatically.

It reduces... you can select from two reduction modes for reductions up to 35% of the original.

It's fast... 4.5 seconds for your first copy and .8 seconds for each subsequent copy. And you can document feed originals without lifting a cover or pressing a button.

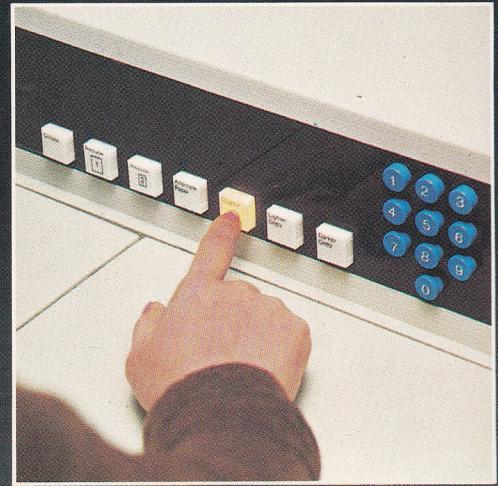

It's versatile... quality copies from a wide range of originals and sizes...quality copies *onto* a variety of stocks and materials.

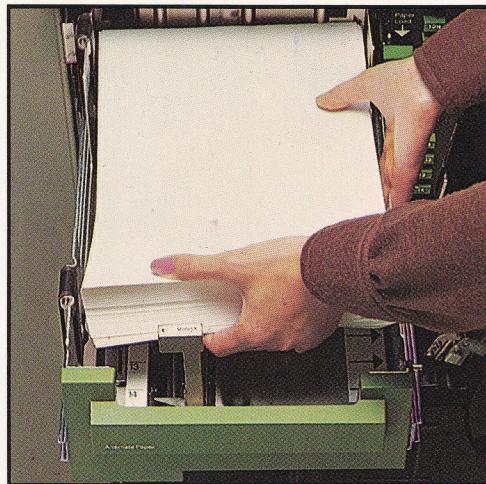

It collates... automatically in either one or two 20 Bin Collator Modules.

The total copier/duplicator... now you can copy, reduce, duplex and collate all at the same time.

Here is Series III... a cut-sheet-fed copier/duplicator for truly fast, versatile and productive copying.

Automatic Duplexing

The simple way to duplex.

In addition to standard copying, the IBM Series III Copier/Duplicator automatically duplexes onto either letter-sized or legal-sized paper. All you have to do is press a button.

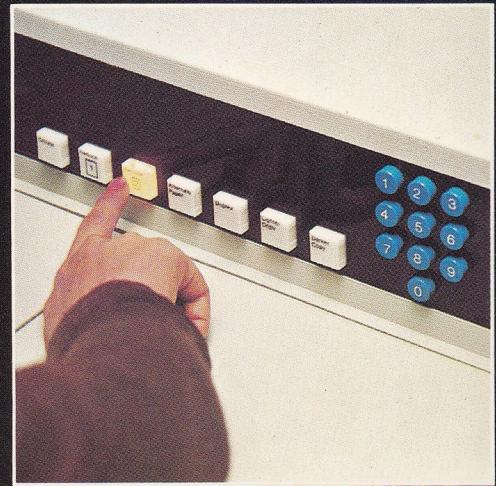

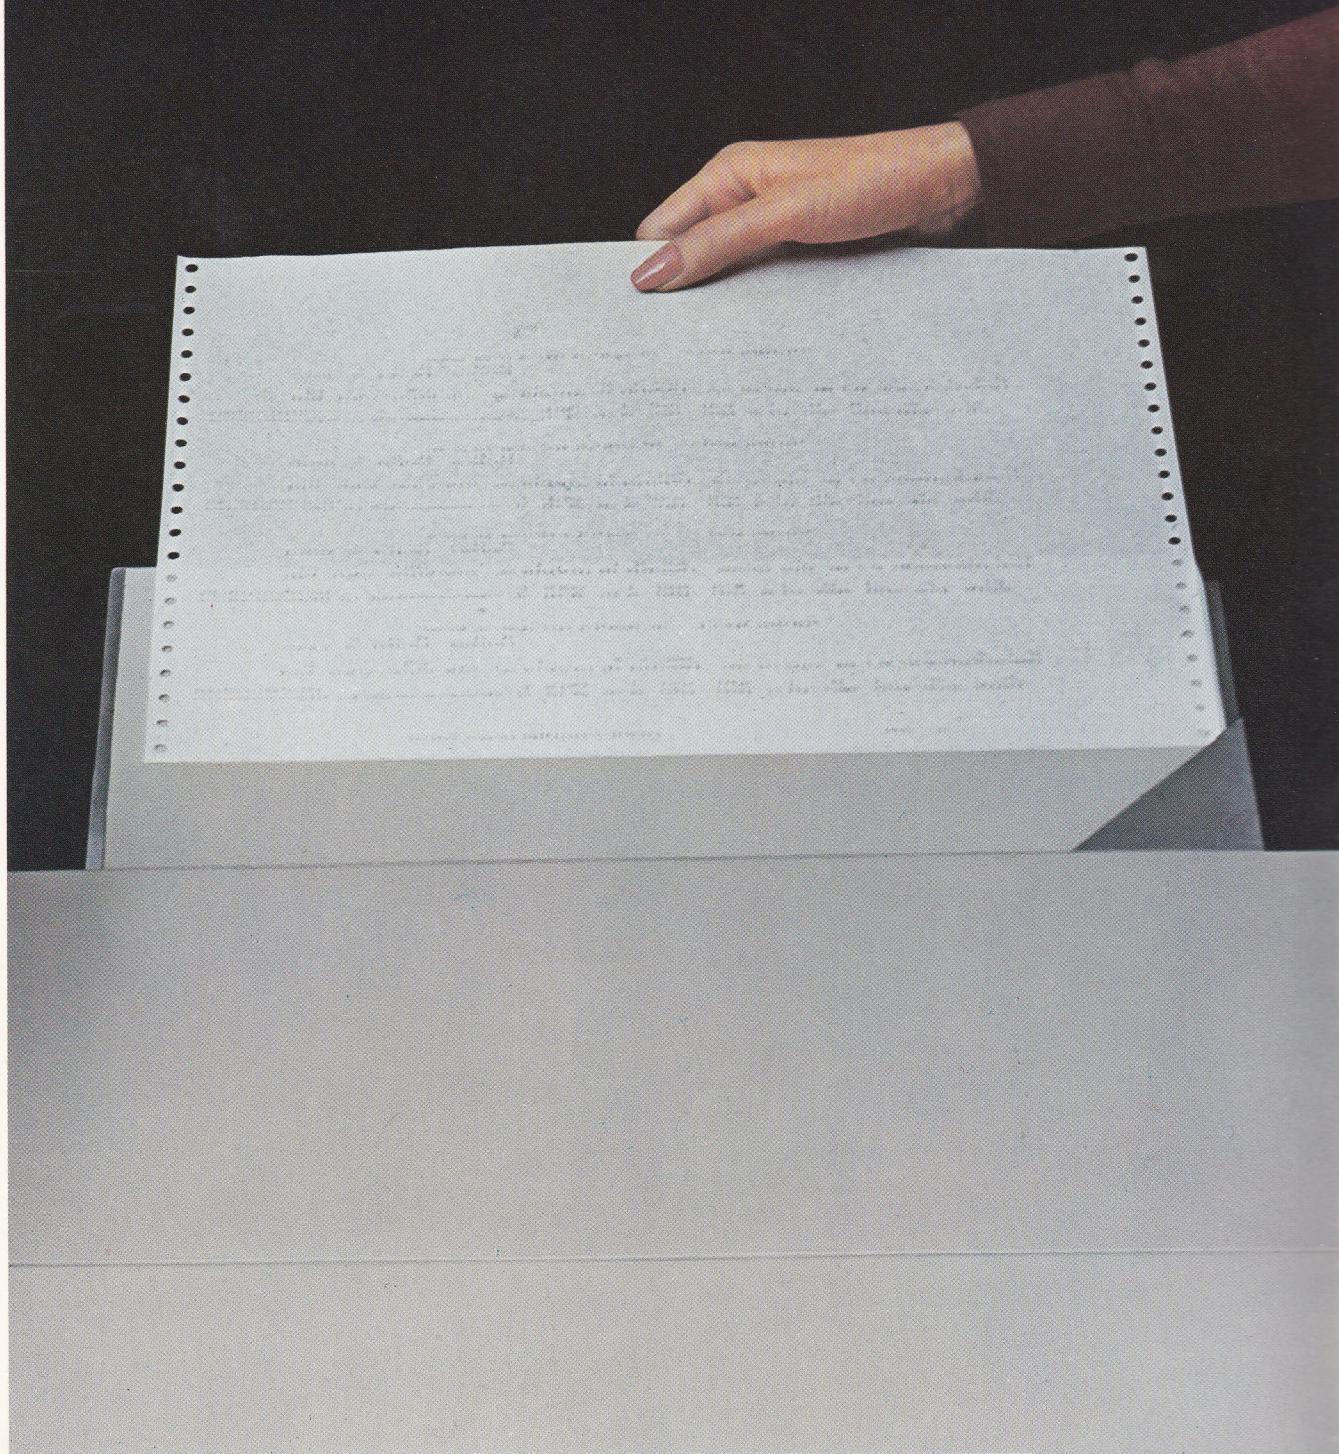

Here is an advanced copier/duplicator that offers you two important kinds of advantages when you duplex your documents.

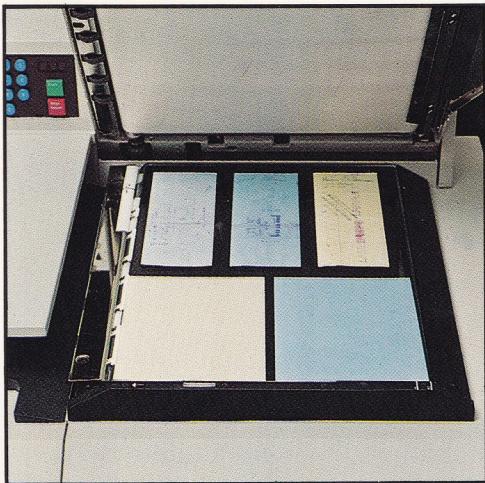

Time-savings... you use one sheet to copy onto instead of two. You can facilitate document handling because you will be using less paper, filing less paper, and mailing less paper.

Simplicity... because of the Alternate Paper Drawer, you can go from letter-sized to legal-sized duplexing, or back again, simply by pressing a button. All told, simplicity of use leads to better productivity for you.

Automatic Duplexing

Reduction

Model 20 Reduction: Fast, Easy, Versatile.

It's fast... as fast as standard copying (4.5 seconds for your first reduced copy and .8 seconds for each subsequent copy).

It's easy... as easy as selecting the reduction mode for the original, simply by pressing a button. And, as shown in the photograph at left, you can feed oversized originals such as computer sheets through the Document Feed.

It's versatile... you can reduce by 26% or 35%. You can reduce oversized documents to standard sizes and create convenient formats for your own special needs, such as reducing related documents to make one document.

Automatic Duplexing

Reduction

Collation

The benefits of automatic collation.

Pushbutton collation ... allows you to press a button and collate. And you can combine automatic collation with other features on the Series III, so you can reduce and collate, for example, or duplex, reduce *and* collate...all at once.

40 bin capacity ... you can choose either one or two 20 Bin Collator Modules for up to a 40 bin capacity.

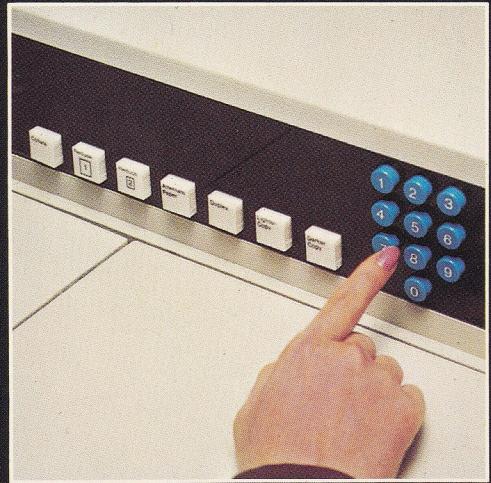

Fast and productive ... your documents are automatically collated as fast as they are copied and each bin can handle up to 100 sheets of 20 pound bond paper.

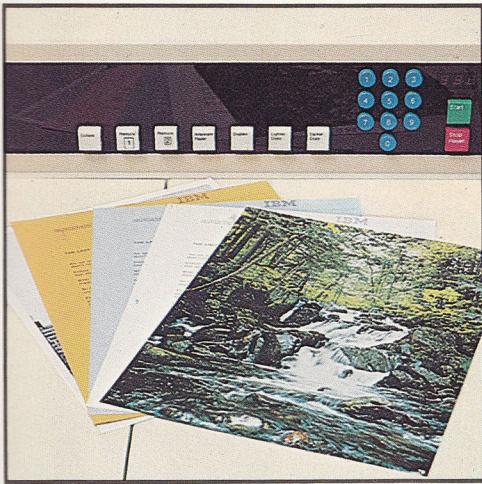

Automatic Duplexing

Collation

Speed and Quality

A copier/duplicator that takes the work right out of your hands.

Document Feed...it starts the copying cycle at the same instant you place a document in it for copying. There's nothing to press or activate. Series III is always ready.

Copying Speed...4.5 seconds for your first copy and .8 seconds for each subsequent copy. Rated speed is 75 copies a minute, 4500 copies an hour.

Pushbutton quantity selection...all you do is press the quantity you need (1-999) and Series III does the rest.

Quality copies every time...from a wide range of originals and sizes (including halftones, line copy, solids and hard-to-image originals)...reduced, duplexed, reduced and duplexed, collated or *uncollated*. And you can copy onto many kinds of materials, such as colored stocks, letterheads and transparencies.

Speed and Quality

Reliability

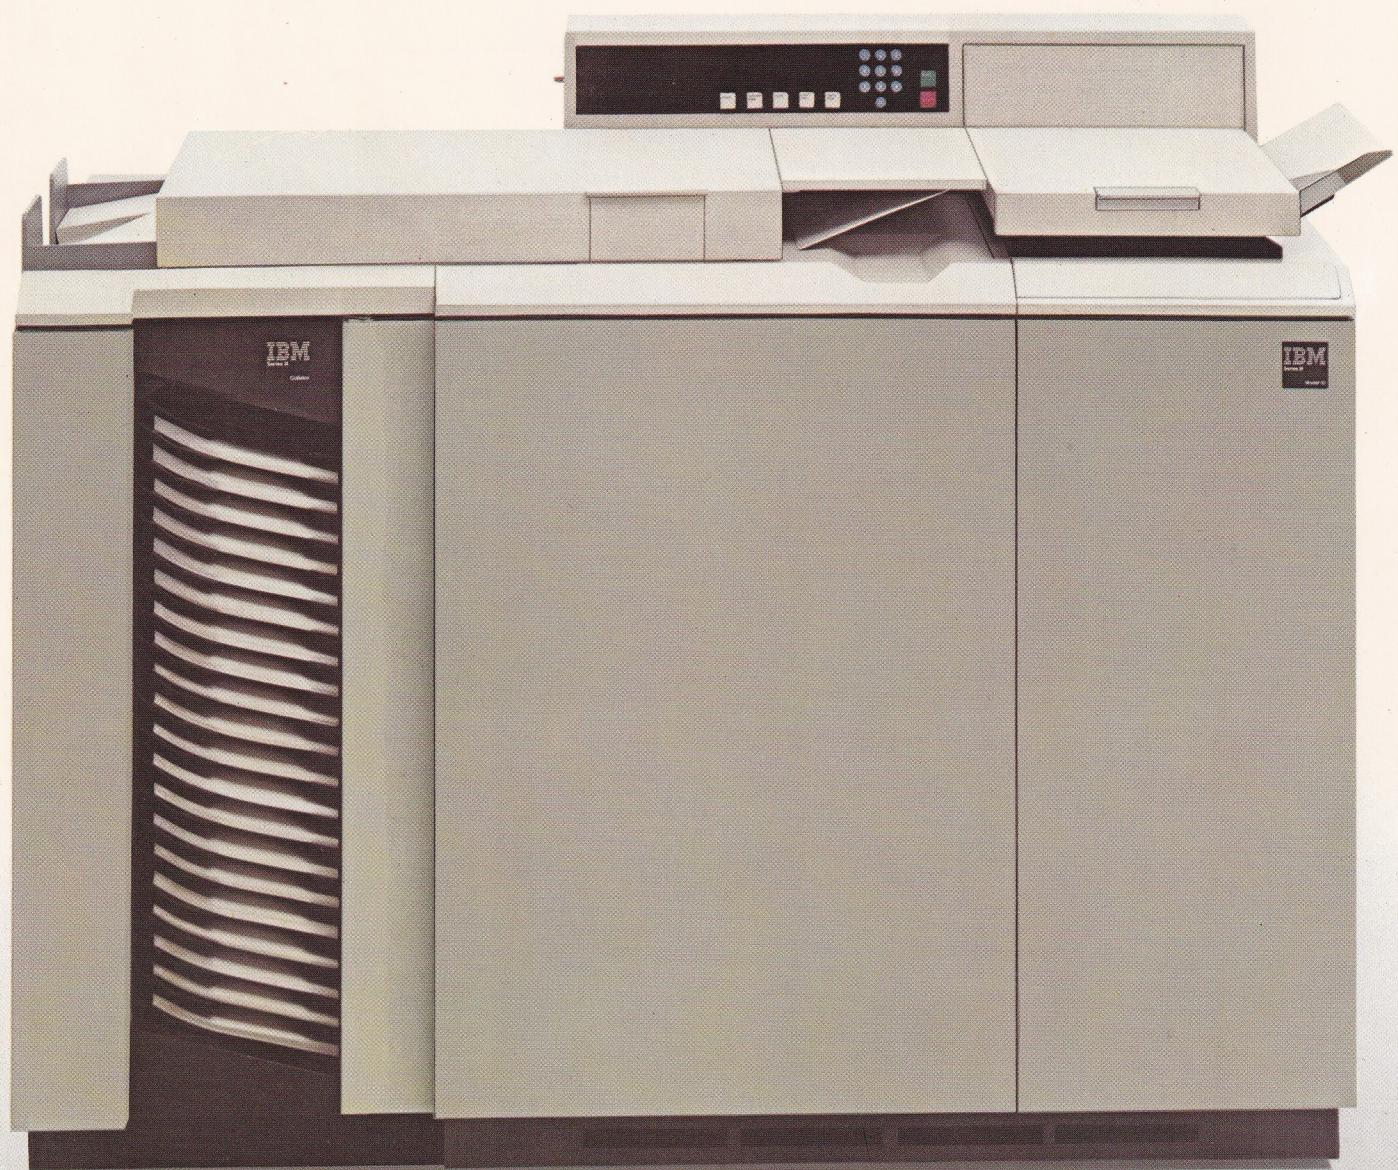

The advantages of built-in computer logic plus simplicity of design.

Operator Assist Panel...it instantly diagnoses situations which may arise and tells you what to do. Whether you need to add paper or check the paper path, you know it fast.

Series III Time-out...after 30 seconds of non-use, Series III automatically reverts to a one-copy simplex mode. So when the next user comes up, there's no operator confusion.

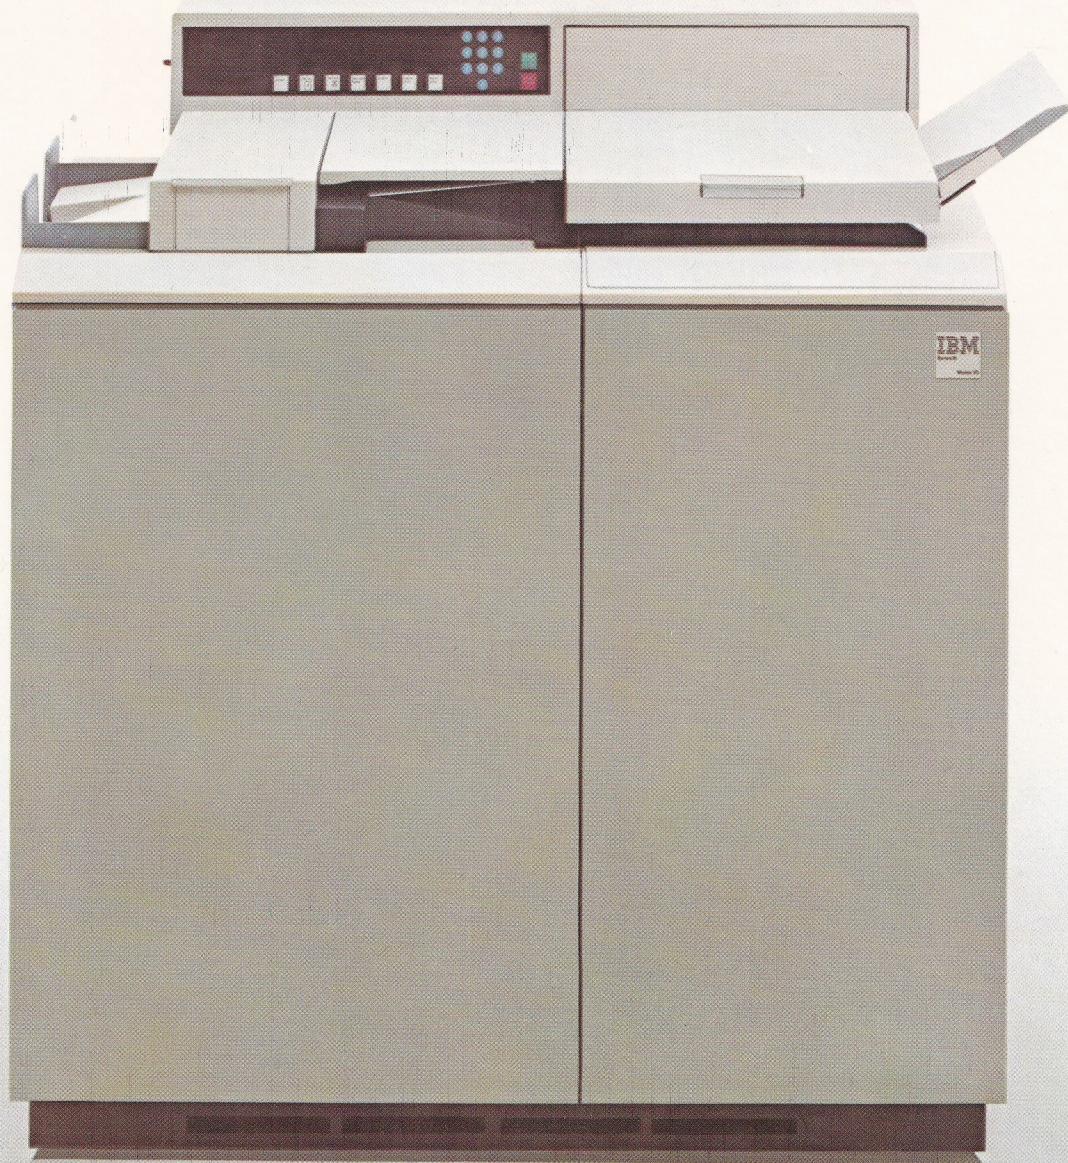

Toner Cartridge convenience...IBM High-Yield Toner, especially formulated for Series III, gives you a quality toner in a compact cartridge for easy snap-in loading. Each cartridge has a 4 pound/64,000 copy capacity, which helps you decrease the frequency of adding toner.

IBM Service...for quick, reliable assistance, IBM Service is only a phone call away.
